

Quick Help - WQ Monitoring

The WQ Monitoring initial screen shows testing sites. Clicking a site shows average e.coli found at that site by year for 2021, 2022 and 2023 using a bar graph at the sampling location.

Toggle the legend in the lower left of the screen to see details about the current screen.

The top menu bar gives a link for the **Hika-Bay** home screen, different **Display options** and a **Description** of the current sampling analysis.

Use  For Display Options on very small screens.

The **Display options** menu gives options for selecting a **Year** (or all years), an analysis to display, **Site Name** and a **Reset** to get back to the initial screen. The Menu Options also has an **Update** button to display the changes you selected. The **Update** button must be pressed to update the screen options.
